

### CUTAWAY D08 DIRECTIONAL CONTROL VALVE

#### DESCRIPTION

It is sometimes difficult for instructors to explain how complex mechanisms, like hydraulic components, work with the aid of photographs and illustrations alone. Based on the ideology of “what I touch I understand,” a cutaway of a component tells its own story about what it consists of and how it works.

Many students will admit that they are “hands-on” learners; they are better at figuring out how components work when the component is in their hands than they are if it is explained with only photographs and illustrations.

FPTI™ prides itself in making cutaway models of the identical components that are on the training simulators. This concept gives students the opportunity to look inside an exact replica of the pump they are studying. They can see exactly what happens inside it when they manipulate adjusting screws or handles.

The DCV-08-CM cutaway model permits students to see exactly how the oil flows within a two-stage D08 size directional control valve with this stunning cutaway. It is also designed to help them understand how to convert a D08 valve from internal pilot to external pilot and vice-versa, and from internal pilot to external pilot and vice-versa.

#### Let us customize a cutaway model for you!

With our in-house design and machining capability, we can customize a cutaway just for you. Send us the model number of the component and we will do the rest.
