

### MAIN FEATURES

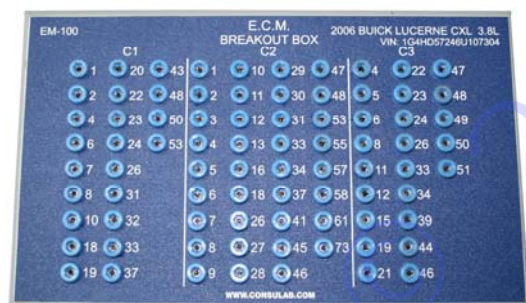

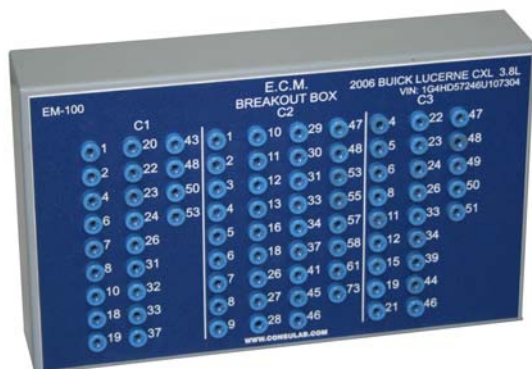

- No more broken connectors on your automotive trainers;
- Electrical measurements can be taken safely and easily without having to disconnect the wiring harness;
- Numbered to match OEM wiring schematics; and
- Wired in parallel with PCM, ECM or BCM.

Dimensions: Included in engine bench dimensions

Weight: Included in engine bench net weight

### DESCRIPTION

The EM-100 Breakout Box can be installed on most Consulab automotive trainers. It can be connected to inputs and outputs of either the ECM (Engine Control Module), PCM (Powertrain Control Module) or BCM (Body Control Module). This useful equipment allows students to take electrical measurements coming from sensors and actuators without disconnecting or damaging the OEM wire color-coding throughout. All the breakout box terminals are identified and matched with manufacturer's car and model.
